Texas Precious Metals (TPM) is one of the largest precious metals companies in the United States. We operate an online precious metals business with offices in Shiner, Texas. We also offer private storage at our world-class depository, Texas Precious Metals Depository, which is 100% fully insured by Lloyd’s of London.

Buying precious metals for the first time can be an intimidating and sometimes frustrating experience. Hopefully, this document will dispel your anxieties. Our intent is to expound on the buying process and to answer common questions collected from years of interactions with clients. The good news is that the process is not much different than buying any other product online. It all begins by establishing a plan. We will help you devise that plan by first addressing some general questions.

Are precious metals a good investment?
You will hear many precious metals companies extolling the upside “investment” opportunities of gold, silver, and platinum. In our view, gold and the other metals are less of an investment and more of an insurance policy. Investments tend to be income-generating, whereas gold and the other metals are “dead” assets. In other words, they act as stores of wealth but not producers of wealth. Partly for this reason, precious metals might be better classified as an alternate currency. If gold rises from $1,000 per ounce to $5,000 per ounce, the owner is not necessarily any wealthier. Gold’s true value is not measured in nominal (dollar) terms, but in relation to other assets. In other words, if gold becomes 5x more expensive in dollar terms, while cars, homes, food, the stock market, etc., also become 5x more expensive, you have simply retained purchasing power, not grown it.

Investing in gold becomes interesting when gold’s nominal price compared to other assets is perceived to be low. If all asset classes crash by 50%, but gold maintains its nominal value, your purchasing power has increased by a factor of two even though, on paper, the gold price has not moved in dollar terms at all. Gold is relational.

Further on we will explore the differences between gold and silver.

THE DECISION PROCESS

How many dollars should I convert into precious metals?
If you are seeking to convert a (relatively) small sum of money into metals, you may be inclined to purchase metals with smaller denominations. The advantage is flexibility. Smaller coins will afford you the opportunity to sell portions of your holdings, or use those smaller denominations for trade. Popular coins for this purpose might be 1-ounce silver coins, junk silver, or fractional denominations of gold. The disadvantage to smaller denominations is that, as a rule, the smaller the denomination the higher the premium on a percentage basis. (It is more expensive to mint 10 of the 1/10th-ounce coins than a single 1-ounce coin.)

For larger investors, the higher premium costs with smaller denominations can become prohibitive, so it is common for larger orders to veer toward 1-ounce and 10-ounce denominations of gold and 100-ounce denominations of silver.

Should I purchase gold, silver, or a combination?
Generally speaking, gold is more "conservative" than silver because the price is less volatile. The silver market is much smaller than gold and tends to be a more speculative trade influenced by industrial demand (90% of all mined silver is used in industrial applications). The two precious metals often move similarly up or down in price, so it is less common that gold and silver will move in opposite directions. When precious metals prices increase, silver tends to increase much faster than gold on a percentage basis. Similarly, when prices decrease, silver tends to decrease much faster.

The decision to purchase gold or silver is heavily predicated on purpose and risk tolerance. For those approaching retirement age or those seeking insurance for a portfolio or currency hedge, gold tends to be a more popular option. For those with greater speculative appetite, silver offers (in the opinion of some) higher upside potential. Additionally, for “preppers” concerned with systemic risk or an apocalyptic shock, silver tends to be valued as a solution for trading or bartering in smaller quantities.

Platinum shares some of the qualities of gold and silver. While commonly (though not always) trading higher than gold, it is a smaller market than silver with a heavy concentration toward industrial usage.
Some precious metals enthusiasts monitor closely the gold-to-silver ratio, which represents the number of ounces of silver needed to equal an ounce of gold. Historically, this relationship has floated anywhere between 10:1 and 20:1, although the ratio has been much larger in recent decades.

A final consideration is size. A $100,000 order of silver could weigh 350 pounds, while a comparable gold order would weigh only 6 or 7 pounds (depending on price). When accounting for the stark per ounce price differential, it is important to note that silver is significantly bulkier than gold.

I want to buy gold. Should I buy gold bars or gold coins? Which gold coins should I purchase and why?

There are three main considerations for gold product selection: premium cost, country of origin, and sell-side tax.

Generally, non-legal tender gold bars are cheaper than legal tender coins by a few dollars per ounce. Clients seeking to purchase gold for the least possible price favor gold bars. The larger the bar, the lower the premium per ounce. Gold bars issued from government mints are IRA eligible. The downside is that the IRS requires precious metals dealers to file a 1099-B form when repurchasing gold bars in increments exceeding 32 ounces per transaction. (See: https://www.texmetals.com/sell-gold-coins/)

Clients purchasing gold coins may choose among several sovereign mints. The premiums on these coins vary depending on the level of government bureaucracy and taxation.

Like gold bars, the Canadian Gold Maple Leaf, the South African Gold Krugerrand, and the Mexican Onza are subject to 1099-B reporting requirements when selling in increments of 25 ounces or more per transaction. All other coins are exempt from 1099-B reporting.

For those wishing to purchase gold in coin form for the lowest possible premium and without 1099-B reporting, the Texas Mint offers the Texas Gold Round, which is one-ounce of .9999 fine gold and the least expensive gold medallion in the market.

I want to buy silver. Should I buy silver bars, silver coins, silver rounds, or junk silver?

Just as with gold, there are three main considerations for silver product selection: premium cost, country of origin, and sell-side tax. An additional consideration is form factor.

For clients seeking the largest quantity of silver for the least cost (i.e. the best bang for the buck), 100-ounce and 10-ounce bars are a common solution, along with 1-ounce silver bars and silver rounds, such as the Texas Silver Round. For institutional investors, 1,000-ounce bars are also an option, although not generally preferable for retail investors.

The difference between a “round” and a “coin” is important to understand. A round is a privately minted non-legal tender medallion in the size and shape of a coin. A coin is a product minted by a sovereign mint with legal-tender face value. Both options offer the same silver weight, form factor, and purity (ranging from .999 to .9999 pure depending on product). The round, however, tends to sell at a lower premium because private mints are not subject to the same financial burdens — and taxation — as sovereign mints.

“Junk” silver is an industry term for pre-1965 U.S. dimes, quarters, half-dollars, and dollars. These coins are composed of 90% silver. Since they were at one time in common circulation, they generally have significant wear when compared to “brilliant uncirculated” coins or rounds. Certain clients are attracted to junk silver because these coins represent the smallest form factor available for silver products, and the premiums tend to be comparable to 1-ounce silver coins on a per ounce basis. In other words, there is generally no significant increase in premium despite the smaller size. It is worth noting, however, that these premiums tend to fluctuate more than newly minted products due to finite supplies. The US Mint no longer produces these coins. Hence, there are acute supply/demand sensitivities in the junk silver market that can lead to higher premiums during times of market volatility.

For silver, there are 1099-B reporting requirements when selling bars in increments of 1000 ounces or more per transaction, or junk silver coins in increments of $1000 face value or more per transaction. All other coins or rounds are exempt from 1099-B reporting.
OTHER COMMON QUESTIONS

Are precious metals purchases subject to sales tax?

On June 21, 2018, the United States Supreme Court announced a decision in favor of South Dakota in South Dakota v. Wayfair Inc, where the state argued it was losing out on local sales taxes with an increasing number of consumers shopping online rather than in brick-and-mortar stores. Since 2018, online retailers such as Texas Precious Metals have been forced to adapt to the varying state sales tax rules and regulations across the United States. Sales taxes are calculated and charged based on the address where the order is delivered.

EXAMPLES:

1. A client residing in Arkansas places an order for $1,000 worth of silver. They would be charged an additional $65.00 in sales tax in compliance with Arkansas sales tax laws as they apply to bullion.

2. A client residing in Arkansas orders $1,000 of silver to be delivered to a Texas Precious Metals Depository. In this case, the client would only pay $1,000 to Texas Precious Metals with no sales tax, because Texas has no state sales tax on gold and silver bullion coins or bars.

For a complete list of tax regulations by state, please visit: https://www.texmetals.com/sales-tax

When it comes time to sell my precious metals, will the sale be subject to capital gains tax?

Long and short term capital gains tax questions fall under the class of topics for which you should consult an authorized tax professional. It is generally understood that profits derived from the sale of precious metals are subject to a capital gains tax of 28%. The reporting of those gains is subject to United States law and the conscience of each individual.

When I buy from Texas Precious Metals, does TPM report the sale to the US government?

Unlike the banking industry, the precious metals industry is unregulated (for now). Therefore, the sale of precious metals is a non-reportable event, provided you are not paying for your purchase with cash (physical dollars) in excess of $10,000, which warrants the filing of Form 8300, or deemed to be involved in suspicious activity (SARS report).

The government is satisfied that the funds originating from your bank via personal check or bank wire have been pre-screened for suspicious activity because of the mandates presently enforced on banks. In other words, the government is convinced that your bank knows the origin of your funds and is conducting the proper due diligence on its clients. Consequently, precious metals dealers are not subject to additional reporting restrictions, no matter the size of the purchase.

Nevertheless, in our technological age, it would be naïve to assume that the government cannot easily track the activity of any person of interest via the communications channels (phone, internet, etc.) leading to the purchase. The world is interconnected. Obviously, it is much more difficult for the government to track the whereabouts of the metal once purchased or the line of ownership once it is gifted, traded, lost, stolen, or otherwise dispensed of.

How do I know my metal is real?

The precious metals we sell originate from two sources: mints or third party sellers such as clients or other dealers.

More than 85% of all the metal we sell originates from the sovereign or private mint producing the coin or bar. The mint guarantees the weight and purity of these products, and we sell them to our clients in the exact condition we receive them from the mint. We open sealed monster boxes or coin tubes only when orders of uneven increments oblige us to do so.

For orders originating from third party sellers (clients or other dealers) we verify the weight and purity of every shipment entering our vault, no matter how large or small, using a combination of methods such as density testing, specific gravity testing, electromagnetic throughput, and other machine protocols.

For those seeking further assurance, a device such as the Sigma Metalyzer (sigmametalytics.com) can be purchased for less than $1,000.

I have heard that the government may confiscate gold again like they did in 1933. Is this true?

It is impossible to know whether or not the government will confiscate precious metals at a future time. However, there are three considerations for those anxious about the prospect:

1. The government can confiscate whatever it wants, whenever it wants, and has been known to seize land and other assets from citizens. In fact, the government presently confiscates a percentage of individual income through various taxes, which can rise at any time. Gold is certainly not immune to governmental oversight and regulation.

2. It is worth noting that, in 1933, the government did reimburse citizens for their gold, albeit at a significantly discounted rate. This form of “confiscation” was therefore different than an airport toiletry confiscation by the TSA, for which there is no reimbursement.

3. Lastly, and perhaps most importantly, it is worth highlighting that the emphasis placed on the 1933 gold confiscation by some precious metals dealers is not without incentive. Certain dealers incentivize their sales force to drive profits, and since collectible coins offer higher margins, these opportunistic salesmen emphasize that the 1933 legislation exempted collectible coins. However, many of the products classified as collectibles today were, in 1933, standard bullion coins, so the coins being promoted today were, in fact, non-exempt at the time of legislation. In the event of future legislation, it is impossible to know what stipulations the government will place on the citizenry.

Is it better to purchase collectible coins or bullion coins?

Purchasing collectible coins is like purchasing a piece of art. Generally, the value resides not in the metal content, but in the rarity, artistry, or desirability of the coin. So, in evaluating collectible coins, it is critically important to recognize that there are hefty premiums on these coins that sometimes far exceed the metallic value. If you desire collectible coins, ensure that your motivation is not for currency-like fungibility (i.e. easily and quickly convertible into an instrument of equal value).

How do I know I can trust Texas Precious Metals?

Texas Precious Metals is a Kaspar Companies subsidiary business. Kaspar Companies is a 124-year-old, fifth-generation family business that has been continuously operating in South Texas since 1898. As the largest employer in Lavaca County, Kaspar Companies employs over 200 employees across seven subsidiary businesses. Since its inception in 2011 through 2022, Texas Precious Metals has processed more than $1.2 billion in client transactions and over 100,000 orders shipped to all 50 states. In total, this represents over half a million ounces of gold and 17 million ounces of silver. In 2014, Texas Precious Metals was recognized as the No. 1 “fastest growing Aggie-owned or Aggie-led business in the world” by Texas A&M University, and in 2015, Inc. Magazine named it the No. 200 Fastest Growing Private Company in America. In 2018, Texas Precious Metals launched Texas Depository (texasdepository.com), a private storage facility catering to individuals, IRA custodians, and other large commercial institutions.

No product is more closely associated with Texas Precious Metals than the Texas Silver Round. As of 2023, in its 11th year in production, there are more than 3 million Texas Silver Rounds in circulation. In total, including 1 oz, 10 oz, and 100 oz silver bars, more than 4.2 million ounces of Texas Mint branded products have been produced to date. The Texas Silver Round became a staple in the precious metals industry by offering investors a unique value proposition. This one ounce, finely struck medallion is more pure than a US Mint Silver Eagle (.9999 fine vs. .9993), less expensive at the retail level, and packaged in superior boxes comprised of steel, which is distinct from the common plastic containers issued from the government mints.

We encourage first-time precious metals buyers to thoroughly research our company and others before purchasing. Read online reviews, assess Better Business Bureau complaints, or make a site visit to the company’s facility, if feasible. The precious metals industry attracts the unscrupulous, so it is important to be diligent!
Popular metals charts, such as Kitco.com, publish the "bid" price at the bid (the lower number) and sell at the ask (the higher number). In most cases, dealers buy metals, with a slight spread between them. Additionally, most markets publish a "bid" and "ask" price for these derivatives, which indicate trade value for delivery at a future date. These prices for "immediate delivery" are distinct from futures traded on the commodities exchange at current market prices.

While it is true that the gold Eagle and Krugerrand are only 91.7% pure, they nevertheless still contain one troy ounce of gold. Their lesser purity is the result of adding metallic alloys to harden the coins, and so the gross weight of these coins is actually 1.09 troy ounces, with a net gold weight of one troy ounce.

What does it mean when a coin is labeled “Brilliant Uncirculated (BU)”?

The term “Brilliant Uncirculated,” or BU, refers to coins that have not been in circulation or handled commonly like commercial coins. They show no significant wear. When privately held bullion coins have abnormal wear, they may be designated as "Almost Uncirculated (AU)" or "common".

A common mistake among buyers is to assume that BU coins possess the same qualities as "graded" coins. This is not the case. Imperfections in the minting process, or slight nicks and scratches, do not disqualify a coin from being designated "BU," particularly when these coins are stacked one upon another in tubes while in transit. Customers who are seeking coins in perfect condition buy MS-70 graded coins, and they pay a higher premium for them.

What is “purity”?

A coin's purity is calculated as the precious metal weight divided by the total weight. In the case of .999 fine gold, the gold content is at least 99.99% of the total weight. A gold American Eagle coin contains one troy ounce of gold, but the total coin weight is 1.09 troy ounces (the coin contains other alloys). Therefore, the purity of the coin is 1/1.09 = .917 or 91.7% or 22 karat.

What is bullion?

Technically, bullion is defined as gold and silver in the form of bars or ingots with purity exceeding 99.5%. However, coins with equal or greater purity, or even common sovereign coins that are only 22k (91.67%) like the gold United States Mint Eagle or South African Mint Krugerrand, are generally referred to as "bullion" even though they do not pass the technical definition, since they are purchased primarily for their metallic content and not for collectible purposes.

Since the United States Mint Eagle and South African Mint Krugerrand are only 22k (91.7% pure), why do they trade at roughly the same price as pure gold products?

In general, Texas Precious Metals will also pay a premium to sellers when individuals are selling back to us, especially for products we carry on our website. Our “buy back” premiums are indicated on individual product pages.

What is the "melt" price?

The melt price is simply the spot price multiplied by the precious metal weight. For a 1-ounce gold coin, the spot price and the melt price are the same. If the gold spot price is $1500, and the gold content in the coin is .9675, then the melt price is $1500 x .9675 = $1451.25.

What is a “troy” ounce?

Most people recall that an ounce is 1/16 of a pound, and when purchasing a half-pound of roast beef at the deli, the butcher will hand you an eight-ounce package. This standard unit of commerce is technically referred to as an “avoirdupois” ounce, and it is used commonly for weighing everything except precious metals and gunpowder.

Instead, precious metals are measured in troy ounces, which is a unit of measure that dates to Roman times. A troy ounce is heavier than the avoirdupois ounce, and the conversion is as follows:

1 troy ounce = 1.09714286 avoirdupois ounces

So, do not be surprised if your 16 “1-ounce” 99.99% pure gold Canadian Maple Leaf coins weigh more than a pound on your kitchen scale. You have not won the lottery, unfortunately. You are simply using the wrong scale.

What is “premium”?

The premium is the markup for a precious metals coin or bar above the spot price. Several factors contribute to a coin’s premium, the most significant of which is the minting cost. Buyers cannot afford (or do not want) 400-ounce gold bank bars; they want smaller denominations, and those smaller denominations must be minted. In the case of sovereign mints, another contributor is taxes, as some governments levy a duty on every coin sold to customers. Shipping costs from the mints to dealers also contribute to the premium. If the premium for a gold coin is $50, the dealer may gross $10-$15 per coin, depending on volume.

For silver and platinum, the same principles apply.

What is the “spot” price?

The spot price of gold is the price of one ounce of gold as contained within a 400-ounce gold bank bar traded on the commodities exchange at current market prices. For silver, it is the price of one ounce of silver as contained within a 1,000-ounce silver bank bar traded on the commodities exchange at current market prices. These prices for “immediate delivery” are distinct from futures prices, which indicate trade value for delivery at a future date.

NOTE: We publish live spot prices on our website. These prices originate from CME GLOBEX. Since precious metals are traded throughout the world on many exchanges, and since websites publish these prices at irregular intervals, it is common that slight variations in pricing exist between websites. For example, a website publishing prices from a certain exchange every two minutes will produce slightly different prices than another site publishing every twenty seconds from another exchange.

Additionally, most markets publish a “bid” and “ask” price for these metals, with a slight spread between them. In most cases, dealers buy at the bid (the lower number) and sell at the ask (the higher number). Popular metals charts, such as Kitco.com, publish the “bid” price. At Texas Precious Metals, we blend the bid and the ask together, which is more favorable to both buyers and sellers (lower price when buying, higher price when selling).
What is a “graded” coin?

A graded coin is any coin that has been evaluated by a third-party grading service in order to certify the coin’s condition using a generally accepted scale ranging from 1-70. The two most popular grading services are NGC and PCGS, and they certify both modern and vintage coins. Graded coins are subsequently mounted inside tamper-proof hard plastic cases commonly known as “slabs,” with a unique serial number archived in the company’s database.

What does it mean to “lock in” a price?

Unlike purchasing an item on Amazon, the prices for our products fluctuate with the commodities market every 20 seconds. They are constantly changing. A buyer “locks in” a price either online or by phone the moment he orders. This is known as a “market order” and is fixed permanently the moment the order is placed, whether the price moves higher or lower afterwards.

Amidst these constant price fluctuations, we protect the company against gains or losses through a process known as “hedging.” We generate profit through product premiums, not by speculating in the commodities markets. As a result, we take a short position on our trading platform - a hedge - against any physical inventory in our possession. Our physical inventory acts as long position. These positions offset each other, thereby negating any price exposure.

When a buyer purchases from our company, we close out our short position, and we transfer to the buyer his precious metals order that becomes for him a “long” position. In this way, purchasing precious metals is very similar to buying a stock. Once you execute the trade, there is no reversing it. Our trading staff adheres to the following principle: For every action, there is an equal and opposite reaction. For every sale, we close out the offsetting position. Therefore, once you “lock in” your order, you own the metal at that price.
What is the process for buying precious metals from Texas Precious Metals?

You may place an order online 24/7/365, or by phone at 361-594-3624, Monday through Thursday, 8 a.m. - 6 p.m. CST, and Friday from 8 a.m. - 4 p.m. CST. There is no additional cost when ordering by phone. We do not employ salespeople at our company, and there are no commissions or sales pitches. Our staff exists for only one purpose: to facilitate a low cost, friendly, and efficient purchase. No one will ever pressure you or make a sales call.

Clients may purchase by bank wire, credit card, or ACH, according to the following chart. For on-site appointments, which must be scheduled in advance, we accept payment by cash and check (see below).

When you purchase by any other form than credit card, such as bank wire or ACH, we will require a 5% credit card hold. This is a hold, NOT A CHARGE. When we receive full payment for your purchase, we will release this hold on your credit card. (This process is similar to when a hotel takes a credit card hold at check-in for incidental expenses or room damages. The hotel will subsequently release the hold when you check out.) Our process is the same, only we release the hold upon receipt of payment. This process also occurs in reverse when selling. We take a credit card hold to lock in the trade until we receive delivery of your precious metals.

Why the hold? We hedge all of our bullion. When you place your order, we unhedge our position, exposing us to price movements in the precious metals markets. The credit card hold protects us against any losses in the event of non-payment (buy) or non-delivery of goods (sell).

Please note that once an order has been executed, it cannot be reversed. Should you cancel your order or fail to remit payment, you will be subject to a cancellation penalty of $350 as well as market losses.

How do I remit payment?

You will receive a confirmation by email when you place your order. At that time you will be able to access your invoice via your online account at texmetals.com. Payment instructions are located in the email as well as our website. You are locked into a price the moment you place your order, and all orders are final, per our terms and conditions. We request payment within 1 business day. We recognize that certain customers may need additional time for various reasons, such as rolling money from money market funds, etc. Please call or email us to request an extension. We are happy to accommodate extensions (within reason). We will never cancel an order without first contacting a customer. We do not accept international orders or payments from international countries.

We do not accept payment by bank check or cashier’s check, because these are considered “cash equivalents.” We limit cash transactions to $10,000 per calendar year per family, and to in-person visits only. Upon receiving your payment, we will send you an email confirmation to access your payment receipt.

The United States government does not require bullion dealers to report any transactions, unless:

a. You pay with more than $10,000 in cash (or cashier’s checks, which we do not accept). This would require a Form 8300 filing. We do not accept cash transactions greater than $10,000. NOTE: This rule does not apply to payments by bank wire or ACH.

b. You are a drug dealer, terrorist, or otherwise in violation of the USA Patriot Act or Texas Precious Metals AML policy.

There are no 1099 reporting requirements on the PURCHASE of bullion. However, there are certain reporting requirements on the SALE of bullion by an individual to a dealer.
**What is your shipping policy?**

Every product we sell is in stock and available for immediate shipment. Unlike most dealers, if we don’t have it, we don’t sell it. You will not wait weeks or months for an order like you do with other companies! We generally ship orders in less than 3 business days from the date that payment clears. If for some rare and unexpected reason we miss this window, we will do all in our power to correct and amend. When your order ships, you will receive an email with instructions to access your tracking number(s).

All orders ship for **FREE**, fully insured.

Orders from $0-$999.99 ship via UPS Ground. Orders $1,000 and up ship via UPS Next Day Air®. If a package is lost or stolen in transit, it is our responsibility to file a claim and issue you a new package. We will ship to homes, offices, banks, depositories, or UPS Customer Centers. We will not ship to mail forwarding companies, PO Boxes, APOs/FPOs, or US territories such as Guam and Puerto Rico. We use three vaults for inventory diversification. Our main vault is located in southern Texas. We also store at vaults on the East Coast and West Coast. Depending on your location, inventory levels, product choices, or other factors, we may ship from any of our three vaults. Be advised that you may receive a tracking number before our carriers actually scan the package, so if your tracking number does not display tracking information the moment you receive the tracking number, please try again after 5 p.m. CST. Please note that, for security reasons, we restrict clients from contacting UPS to change delivery instructions. If you need to change your delivery address while the package is en route, please contact our logistics department.

All packing operations are video recorded. In the rare event that we make a mistake, we will review our video logs. We will happily correct any shipping mistakes. Upon completion of your order, you may receive a follow-up phone call to ensure delivery completion.

**What if I want to pick up my purchase at your facility?**

We welcome clients to pick up orders in person at our facilities in “the Cleanest Little City in Texas”. Client pick up and in-person purchases are available Monday through Friday, 9 a.m. to 4 p.m. CST. Please make an appointment. We request at least 24-hour advance notice of your arrival. We do not have a showroom, and for security reasons, our vault is not located at our administrative address. Therefore, your advance notice is greatly appreciated. If you are picking up in person, be advised that we are Texan, so the entire staff is armed.

**What is a “limit order”?**

A limit order is a standing order with a “commitment to buy” or a “commitment to sell” if the gold or silver price reaches a buyer’s desired value. For example, if gold is trading at $1,500, and a client wishes to buy gold at $1,490, we can create a limit order for our clients which is automatically executed and turned into an order if the price reaches $1,490.

1. Limit orders are good for client-specified lengths of time, and cancel automatically at 4:45 p.m. EST on the day specified.
2. A limit order can be changed at any time at no charge as long as the trade has not executed.
3. A limit order is a firm order. If the limit order is executed, the order cannot be reversed.
4. We confirm all limit orders with a credit card authorization.

**What is your shipping policy?**

NOTE: The commodities market is a 24-hour market, trading Sunday night through Friday at 5 p.m. EST weekly. Many limit orders execute in the middle of the night.
What happens when I want to sell?

The process is simple. Call us Monday through Thursday 8 a.m. - 6 p.m. CST, and Friday from 8 a.m. - 4 p.m. CST to lock in your sell price (major credit card required). You will need to ship your bullion to us within 24 hours of “lock in.” Customers have the option of selecting their own shipping and insurance provider. However, we offer door-to-door pickup and delivery via UPS for your convenience. If you would like us to arrange shipping, we will e-mail you a shipping label for overnight shipment, and we will schedule a pickup for the following day.

We publish our buy back price on each product page. We also repurchase products we do not sell.

When it comes time to sell your products, the government does require bullion dealers to file reports where applicable. The IRS report is the 1099-B form, and it applies to the following transactions:

<table>
<thead>
<tr>
<th>REPORTABLE ITEMS</th>
<th>MINIMUM FINENESS</th>
<th>MINIMUM REPORTABLE AMOUNT</th>
</tr>
</thead>
<tbody>
<tr>
<td>GOLD BARS</td>
<td>0.995</td>
<td>ANY SIZE BARS TOTALING 1 KILO (32.15 TROY OZ)</td>

<td>U.S. 90% SILVER COINS</td>
<td>AS MINTED</td>
<td>ANY COMBINATION OF DIMES, QUARTERS, OR HALF DOLLARS $1000 FACE VALUE OR MORE</td>
</tr>
</tbody>
</table>

You might wonder why sales of these specific objects are reportable. These reporting requirements are related to the regulations that require brokers to report all proceeds from stack and commodity transactions. These specific products are currently traded (or used to be traded) on commodity exchanges.

Form 1099-B reporting requirements do not apply to any other coins. They do not apply at all to American Gold Eagles, American Buffalo, Austrian, Chinese, Australian (Perth Mint coins), or any fractional bullion gold coins. And they apply only if you sell at least the minimum quantity that is equal to the quantity of a commodity contract for the object.
THE BUYING AND SELLING PROCESS – IRA ROLLOVERS

How do I rollover my IRA into physical precious metals?

To create or rollover an IRA into precious metals, you must first select a custodian. We can place you in contact with well-established custodians, or you can select the custodian of your choosing.

Once you have selected your custodian, you must fund an account with your custodian and lock in pricing terms with us. Your custodian will issue bank wire payment to us on your behalf, and we will ship your precious metals to your depository.

What is a custodian?

An IRA is a trust or custodial account set up in the United States government for you or your beneficiaries. All IRAs must be held by a custodial entity. A custodian is a designated financial institution (bank, credit union, or licensed non-bank institution) that administers the client’s securities. Their services include account administration, financial transactions, tax support, and other related trust management. The fees charged by the custodians vary depending on the services desired by the client.

What is a depository?

A depository is a high security private storage facility. While a custodian is technically allowed to own or manage a depository, it is extremely rare. In nearly all cases, a custodian will use a third-party depository. Therefore, it is necessary that you select the depository at which you desire to store your precious metals. Note that not all custodians maintain agreements with every depository, so be sure to inquire. At Texas Precious Metals Depository, we work with dozens of IRA custodians, the largest of which is GoldStar Trust. For more information, please visit TexasDepositry.com.

Who does the purchasing?

Once you have chosen a custodian, funded your account, and selected your depository, purchasing precious metals is really no different than an ordinary transaction. You may place an order online 24/7/365, or by phone at 361-594-3624, Monday through Thursday, 8 a.m. - 6 p.m. CST, and Friday from 8 a.m. - 4 p.m. CST. We will need to know:

1. Your IRA account number, and
2. The name of a contact person at your custodian.

Since your funds reside within the IRA, we must contact your custodian for payment. Once payment has been received, we will ship directly to your depository.

My IRA is "self-directed." Does this mean I can take possession of my bullion?

No. The Internal Revenue Code requires that a custodian safeguard your IRA-held precious metals. A "self-directed" IRA is simply a retirement account that enables the individual to direct the investment decisions.

Is there any circumstance in which I could take possession of my IRA-held precious metals?

It is technically possible for an individual to become the custodian of his IRA, but this process is more complicated legally and falls beyond the scope of this document.

How do I liquidate the precious metals in my IRA?

In a self-directed IRA, you may liquidate your holdings by contacting our trading desk to lock in a "sell" order. We will issue instructions to your custodian, who will then arrange shipment of your metals from the depository to Texas Precious Metals. We remit settlement via bank wire to your custodian within 1 business day of receipt of your precious metals. If you store your IRA holdings at Texas Precious Metals Depository, IRA liquidations typically happen 3-7 days faster than orders shipped in from other depositories since there is no transit time lost. An added benefit of IRA storage in our depository is that there are no shipping or handling costs when liquidating your holdings.
Texas Precious Metals is a Kaspar Companies subsidiary business. Kaspar Companies is a 124-year-old, fifth-generation family business that has been continuously operating in South Texas since 1898. As the largest employer in Lavaca County, Kaspar Companies employees over 200 employees across seven subsidiary businesses. Since its inception in 2011 through 2022, Texas Precious Metals has processed more than $1.2 billion in client transactions and over 100,000 orders shipped to all 50 states. In total, this represents over half a million ounces of gold and 17 million ounces of silver. In 2014, Texas Precious Metals was recognized as the No. 1 “fastest growing Aggie-owned or Aggie-led business in the world” by Texas A&M University, and in 2015, Inc. Magazine named it the No. 200 Fastest Growing Private Company in America. In 2018, Texas Precious Metals launched Texas Depository (link), a private storage facility catering to individuals, IRA custodians, and other large commercial institutions.

No product is more closely associated with Texas Precious Metals than the Texas Silver Round. As of 2023, in its 11th year in production, there are more than 3 million Texas Silver Rounds in circulation. In total, including 1 oz, 10 oz, and 100 oz silver bars, more than 4.2 million ounces of Texas Mint branded products have been produced to date. The Texas Silver Round became a staple in the precious metals industry by offering investors a unique value proposition. This one ounce, finely struck medallion is more pure than a US Mint Silver Eagle (.9999 fine vs. .9993), less expensive at the retail level, and packaged in superior boxes comprised of steel, which is distinct from the common plastic containers issued from the government mints.

Another innovation was the first ever “mini-monster box,” a half-monster box comprising 250 ounces of silver, offering cost-conscious investors with a less expensive alternative to a mint-issued monster box. The Texas Silver Round’s popularity was a prelude to the Texas Mint. In its 11-year history, the reverse of the silver round has featured a cowboy, a longhorn, a white-tailed deer, a coyote, and a bobcat, the Texas Capitol, and a 4-year Texas Revolution Series featuring key battles in Texas history. These images accompany the consistent obverse of the geographic outline of the state of Texas in the background and Texas’ iconic lone star in the foreground.

Texas Precious Metals’ mission is to provide value to customers through fanatical customer service, low premiums, superior products and easy ordering. Pure and simple.
PRIVATE STORAGE

Storage of gold, silver, platinum, and palladium is private, fully segregated, and individually sealed. Metals are never commingled or allocated.

100% INSURED & AUDITED

Our Lloyd’s of London Insurance policy covers the full value of metal contents in the facility and adjusts to prevailing market rates. Insurance protection covers external theft, employee theft, fire, flood, and other natural disasters. Storage contents are audited annually by San Antonio firm ADKF.

SECURE FACILITY

Our underground facility is outfitted with bulletproof doors, metal detection, man traps, truck traps, biometric access, armed security, 24/7 surveillance, and three layers of concentric protection. Facility operators employ best practices such as dual controls, segregation of duties, chain of custody monitoring, and 5S methodology. All security personnel are employees of TPMD (no outsourced security)! Facility alarms are tied directly to local and county law enforcement situated within one mile of the depository.
